EXPERIENCE

Adikteev.....
Analytics Engineer Dec 2024 - Jun 2025, Paris, France

Adikteev provides programmatic solutions to help mobile apps acquire and re-engage users. As an Analytics Engineer, I delivered data-driven solutions and provided technical support across internal teams and external clients.

Product technical support

- Built and owned an Airflow ingest pipeline to pull client ad-event files from Dropbox, validate, normalise records, and deliver processed data into internal Google Sheets for reporting and analytics.
- Designed reusable SQL report templates and productised them as scheduled Airflow deliveries used by Sales / Revenue for client reporting.
- Acted as L2 technical contact for internal colleagues and clients across data, and operational issues, translating technical findings into clear explanations and coordinating fixes.

Adikteev.....
Analytics Engineer Intern Jun 2024 - Dec 2024, Paris, France

Data operations & Tooling

- Owned and maintained audience segmentation Airflow pipelines used by the Revenue team for campaign targeting.
- Delivered and maintained a Python on-call automation bot (Slack + HR API) to streamline rotation assignments.
- Supported pipeline monitoring and debugging (Airflow, Trino/Redshift), applying fixes to reduce manual interventions.
- Diagnosed tracking-link and attribution discrepancies with MMP partners (e.g., Singular, Adjust), coordinating investigations and fixes with product and partners.

PROJECTS

Churn Prediction Analytics Platform.....
Machine learning Engineer EPITA, Le Kremlin-Bicêtre, France
(Academic project)

Deep Learning for Churn Prediction

- The objective was to research state-of-the-art deep learning models to develop a Minimum Viable Product for telecoms churn prediction.
- Developed a hybrid ensemble deep learning model (DNN + BiLSTM) for churn prediction; tracked experiments with MLflow.
 - Designed data validation processes using Great Expectations to improve data integrity and quality.
 - Deployed the model using FastAPI with PostgreSQL for persistence and real-time inference.
 - Automated prediction workflows using Airflow with Docker-based orchestration.
 - Built interactive dashboards in Grafana and Streamlit to surface model performance and presented actionable insights.

SUMMARY

Junior Analytics Engineer with 1+ year experience building reliable ELT pipelines and internal tooling for AdTech analytics, seeking a transition into Machine Learning Engineering. Skilled in Airflow, Python, SQL and production debugging; focused on enabling analysts and product teams through robust, scalable data workflows.

EDUCATION

EPITA Paris, France
Master of Science - Computer Science
GPA: 16.11/20

USTH Hanoi, Vietnam
Bachelor of Science - Cyber Security

SKILLS

Programming	Python, SQL
API	FastAPI
Data Handling	Pandas, Numpy
Data Validation	Great Expectations
Data Warehouse	Redshift
Query Engine	Trino
OS	macOS, Linux
CI/CD	Docker, Github, Github Actions
Cloud	AWS
Misc.	Airflow, Hive
Soft Skills	Autonomous, Rigorous

LANGUAGES

- English - C1
- French - B1+
- Vietnamese - Native
